EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Pursuant to MPEP 606.01 the **Title** is changed to read:

**-- UPDATING APPLICATION DATA INCLUDING ADDING FIRST CHANGE
LOG TO AGGREAGATE CHANGE LOG COMPRISING SUMMARY OF CHANGES --**

Allowable Subject Matter

Reasons for indicating allowable subject matter

The present application has been thoroughly reviewed, upon searching a variety of databases, the examiner submits that Claims 1-18 are allowable in light of the applicant's arguments at page 7-11, and in light of the prior art made of record.

The present invention is directed to a merging the contents of plurality of change logs into an aggregate log, more specifically creating an aggregate log, retrieving the contents of a current change log, adding the contents of the current change log to the aggregate log.

The closest prior art Birkler, WO 00/29998 is directed to optimization of change log handling, more specifically, optimize information synchronization between first and second device, where the second device stores a change counter value associated with a last synchronized entry of a change log stored at the first device. A portion of the change log containing entries occurring after a submitted change counter value is preferably transferred from the first device to the second device in predetermined order [see Abstract, page 3, 8-20, fig 2].

Prior art Bowen et al. US Patent No. 5832519 is directed to updating database values without the use of locking operations, more specifically, Bowen teaches general purpose computer is an aggregation system. The aggregation system update and read certain data values such as numeric summary data values which are updated frequently with minimal or no use of locking operations. The aggregation system processor

performs update operations by receiving the incremental updates from the general purpose computer and writing them into the log relation maintained in the memory [see Abstract, col 4, line 31-36, line 45-50].

However, Birkler, WO 00/29998, Bowen et al. US Patent No. 5832519. either singularly or in combination, fail to anticipate or render obvious the recited feature *'adding said first change log to an aggregate change log, the aggregate change log comprising a summary of changes in said added change log and any previous change logs'* in Claim 1,18, *"a merging routine for iteratively aggregating the contents of said plurality of change logs to an aggregate log"* in claim 8, *"adding said first change log to an aggregate log on the first client device"* in claim 11. These features together with the other limitations of the independent Claims are novel and non-obvious over the prior art of record. The dependent Claims 2-7,9-10,12-17 being definite, enabled by the specifications, and further limiting to the independent Claim, are also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
